**Figure S1.** Screening, Enrollment, and Survey

From the original 760 random points geospatially identified, 417 house locations were determined to have municipal water supply and no well; 12 others were not eligible. Forty-seven of the remaining 255 eligible households refused to complete the survey; at 26 houses respondents were not available at multiple follow-up visits; 2 were not approached for safety reasons. At the remaining 180 households (71% of the 255 eligible households), an adult respondent agreed to complete the survey covering the health status of the 492 individuals living in these households.
