

Generalized Record of Ground Water Impact Sites

This report lists all sites regulated by the OCD - Environmental Bureau that are known to have ground water that has been contaminated from leaks, spills, and releases of oilfield wastes or products. All sites, whether active or closed are listed. Active sites may currently be at any stage of investigation or remediation in accordance with an OCD approved abatement or remediation plan. Ground water impacted sites may or may not require extensive remediation; however, each site is considered active until the responsible person demonstrates compliance with the Water Quality Control Commission (WQCC) regulations. For additional information about any site, please contact the OCD Santa Fe Office at 505-476-3490.
